

CRANE

CRA NORM ENGINE

WHITE PAPER · PLATFORM OVERVIEW

Compliance for every product with digital elements.

The EU Cyber Resilience Act makes cybersecurity a **legal precondition for selling** products with digital elements — hardware, software, and the remote-processing solutions behind them. **CRANE** is the self-hosted, open-source engine that turns those obligations into a living, auditable conformity dossier — generated, not assembled by hand.

REGULATION

(EU) 2024/2847

LICENSE

Open source · AGPL-3.0

FULL APPLICABILITY

11 December 2027

01 The compliance cliff

Any product with digital elements placed on the EU market must demonstrate conformity with the CRA's essential requirements — or it cannot carry the CE mark, and cannot be sold. CRANE keeps your data on your own infrastructure: no telemetry, no vendor lock-in.

Sprawling scope

Annex I security properties, SBOMs, vulnerability handling, risk assessment, and technical documentation — across every release.

Living obligations

24h / 72h / 14-day incident reporting, coordinated disclosure, and support-period duties for the product's whole life.

Audit-grade proof

Authorities and notified bodies expect traceable evidence — not a last-minute spreadsheet.

“Compliance isn't a document you write once. It's a state your product is continuously in — and must be able to prove on demand.”

— THE CRANE DESIGN PRINCIPLE

02 One engine, end to end

● Product & release registry

Versions, releases, and support periods with full lifecycle history.

● SBOM analysis

CycloneDX / SPDX ingestion, quality scoring, NTIA checks, CVE exposure & diffing.

● Vulnerability management

CVE tracking, EPSS risk scoring, VEX assessments, patch workflows.

● Annex I matrix

Trace each requirement to risk items, applicability rationale, and evidence.

● Release gates

Block placing-on-market until evidence-backed readiness checks pass.

● Risk assessments

STRIDE / TARA methodology with approval workflows.

● CVD & reporting

Disclosure policy plus 24h/72h/14-day ENISA reporting readiness.

● Audit, RBAC & LDAP/AD

Hash-chained log, role-based access, enterprise identity.

03 The conformity dossier

Capture the data once through the app and every release produces a complete CRA report — a polished PDF and an interactive in-app view from a single source of truth. Gaps are shown honestly, never fabricated.

DOSSIER SECTIONS

2024/2847

CRA REGULATION

100%

ON YOUR INFRASTRUCTURE

From identity, economic operators and classification, through risk, the Annex I matrix and SBOM findings, to conformity route, the EU Declaration of Conformity, Annex VII technical documentation, CVD readiness and release sign-off — every CRA touchpoint in one traceable document.

SME

manufacturers

A free alternative to costly GRC suites — self-host with Docker in minutes.

Software vendors

Products, releases, SBOMs and vulnerabilities in one place from day one.

Consultants

A dedicated instance per engagement; portable export at project close.

Critical infra

No external data sharing; LDAP/AD for enterprise environments.

Make conformity a **state**, not a scramble.

CRANE turns the EU Cyber Resilience Act into a workflow your team can actually run — and a dossier you can hand to an auditor with confidence.
